

Network Security

DATA SHEET

General aspects of the area

BASE4 Security is a partner of more than 50 technological solutions that allows flexibility to offer the best cybersecurity architecture to customers.

We are currently positioned as the leading provider of the most important technologies globally, as a result of a long history and experience in implementation, support, training and platform management, as well as constant technological innovation.

Demo's and Proofs of Concept are carried out for all of them, with the objective of proposing niche technologies and world market leaders.

Technological platforms marketed by BASE4 Security:

- Endpoint Protection (EDR/XDR)
- Cloud Protection (Posture, CASB, Proxy Cloud)
- Perimetral Protection (FW, WAF, DDOS)
- Application Protection (DevSecOps, API Security, Threat Modeling).
- Monitoring (SIEM, SOAR, Awareness, Digital Risk)
- Infraestructure Protection (IP Scanning, AD Security, Policy Compliance)
- Identity Protection (MFA, Governance, PAM).
